Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

2. Group I, claim(s) 1-15, 33, 34, 39, drawn to method classified in class 128 subclass 898.

If applicant elect Group I, applicant would further require electing sub-species, disclosed as follows:

Species a: Figure 9.

Species b: Figure 10.

Species c: Figure 11-15.

Species d: Figures 16-17.

3. Group II, claim(s) 16-24, drawn to material classified in class 442 subclass 046.

If applicant elects Group II, applicant would further require electing sub-species, disclosed as follows:

Species aa: Figure 9.

Species bb: Figure 10.

4. Group III, claim(s) 25-32, drawn to apparatus classified in class 128 subclass 834.

If applicant elects Group III, applicant would further require electing sub-species, disclosed as follows:

Species A: Figure 11-15.

Species B: Figures 16-17.

5. Group IV, claim(s) 35-38, drawn to kit classified in class 206 subclass 363.

If applicant elects Group IV, applicant would further require electing sub-species, disclosed as follows:

Species a: Figure 9.

Species b: Figure 10.

Species c: Figure 11-15.

Species d: Figures 16-17.

While reviewing the examiner has found that the application is replete with numerous claim objection due to multiple dependency and the examiner is not clear what is applicant is claiming. Please take this in consideration when responding to this restriction requirement.

6. The inventions listed as Groups I, II, III and IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The group II invention is either anticipated by or obvious over US PG PUB 200400055364 teaches a wound dressing using mesh material including synthetic meshes (X). Further, Group III invention invention is either anticipated by or obvious over patent 5,395,354 as being

used as passeries or malleable stay (Y). Therefore, there is no special technical feature that defines a contribution over the prior art.

From MPEP 1850:

Lack of unity of invention may be directly evident "a priori," that is, before considering the claims in relation to any prior art, or may only become apparent "a posteriori," that is, after taking the prior art into consideration. For example, independent claims to A + X, A + Y, X + Y can be said to lack unity a priori as there is no subject matter common to all claims. In the case of independent claims to A + X and A + Y, unity of invention is present a priori as A is common to both claims. However, if it can be established that A is known, there is lack of unity a posteriori, since A (be it a single feature or a group of features) is not a technical feature that defines a contribution over the prior art.

MPEP 1850 also states that "Unity of invention has to be considered in the first place only in relation to the independent claims in an international application and not the dependent claims." [emphasis added].

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
